

SOFTWARE ENGINEER

Job Description:

Infomedia is a small but fast growing company that provides direct carrier billing services to an international network of mobile networks and digital content businesses. As it looks to its next phase of growth, the company is currently looking for a Software Engineer to work within our Platform team to help deliver against our vision.

The successful candidate will contribute to updating existing software through standard development procedures to deliver quality components into our live environment.

Key responsibilities will include:

- Working on existing applications making improvements to known issues and bugs.
- Working from Designs created by the architecture team on projects that are allocated to the Application Management team
- Supporting Service Management during Incidents and problems
- Working on projects to help improve the stability and ultimately the uptime of our live environment
- Liaising with project teams to communicate project progress and raise risks with potential solutions for completion of project in a timely manner
- Ensuring on-time delivery of high-quality, efficient, scalable and robust software deliveries
- Adhere to relevant coding standards and industry best practices
- Updating platform documentation in-line with new deliveries
